

Bellabeat Case Study: "Act" Phase Deliverable

Prepared by: *Emanuel Cunha*

Date: *June 2026*

Executive Summary & Top Three Recommendations

Based on a comprehensive analysis of smart device usage patterns, the following high-level recommendations are submitted to drive user retention, engagement, and premium hardware upsells for Bellabeat:

1. Deploy an Adaptive "Smart Nudge" App Ecosystem

Action: Update the Bellabeat app behavior to sync notifications with user routines. Schedule a **11:45h Midday Spark** prompt to drive movement before the lunch peak, a **16:00h Post-Work Energy** prompt to encourage evening workouts (16h–19h), and a **19:00h+ Evening Engagement Loop** to deliver wellness content (recipes, tips, blogs) and interactive surveys as physical activity drops.

2. Establish the Sunday "Weekly Wellness Recap"

Action: Since Sundays represent a universal low-activity rest phase, pivot app messaging away from missing daily step counts. Instead, deliver a celebrated, cumulative weekly summary that rewards consistency over total steps, building positive long-term brand affinity.

3. Implement a Gamified E-Commerce Revenue Loop

Action: Capitalize on peak activity days (Tuesdays and Saturdays) by rewarding users with streak points for maintaining their habits. Allow users to redeem these points for direct discounts on premium Bellabeat hardware (Ivy, Time, Leaf), effectively converting user data into a hardware upsell engine.
