

Bellabeat

Strategic Analysis

GOOGLE DATA ANALYTICS CAPSTONE

Agenda

1 **Introductions & Overview** (4 mins)

2 **Data & Trend Analysis** (10 mins)

3 **Strategic Recommendations** (6 mins)

4 **Questions & Discussion** (5 mins)

The Business Task

Marketing Objective

Analyze smart device usage to find consumer habits that can drive Bellabeat's growth.

The Challenge

How can we use activity patterns to make the Bellabeat app a more essential part of a woman's daily life?

Initial Hypotheses

The Working Routine:

We expect weekday activity to match office hours, peaking during lunch and commuting times.

Weekend Shift:

We predict users will wake up later and have a more relaxed energy flow on Saturdays and Sundays.

Nightly Wind-Down:

We expect movement to drop significantly after 7:00 PM across the entire week.

Methodology & Limitations

Key Limitations

Small Sample Size Risk: The dataset tracks only **33 users**, which is a small sample size that may not accurately represent the broader global market.

Anonymized Demographics: The data lacks critical background information (age, location, lifestyle), meaning we cannot verify if these users match Bellabeat's target customer profile.

Outdated Baseline: The data stems from **2016**. While core human behaviors remain similar, exact digital habits and device features have evolved.

No Seasonal Insight: The dataset only covers a **1-month window** (April–May 2016), making it impossible to account for winter/summer lifestyle changes.

Hourly Activity Patterns

12th of April - 12th of May 2016

Data represents the average activity of all 33 users.

High Activity

Low Activity

ACTIVITY WINDOW

- **8h – 19h (Mon–Fri):** Activity is tightly bounded by office hours.
- **Lunch Spikes (12h–14h):** Midday walks, strolls, or quick workouts.
- **Commute Peaks (16h–19h):** High intensity during end-of-day.

WEEKEND SHIFT

- **9h+ Start:** Delayed onset compared to 7h/8h weekday starts.
- **Relaxed Mornings:** Reflects slower wake-up windows and personal rest cycles.

EVENING DROP-OFF

- **20h Plunge:** Sharp, consistent drop across most days.
- **Weekend Exception:** Activity stays elevated until 20h (Fri/Sat).
- **23h Inactivity:** Near-total drop as users prioritize sleep.

Daily Activity Patterns

12th of April - 12th of May 2016

PEAK ACTIVITY DAYS

- **Tuesdays:** Driven by mid-week habit consistency, likely representing structured personal exercise routines.
- **Saturdays:** Driven by weekend leisure time, reflecting high movement from personal errands, outdoor activities, or dedicated workouts.

LOWEST ACTIVITY DAYS

- **Fridays:** A distinct drop in step volume, likely stemming from workweek fatigue and a mental shift away from standard active routines.
- **Sundays:** The absolute lowest activity baseline, representing a universal rest and recovery phase before the workweek resets.

Product Recommendations

APP FEATURE: SMART NUDGES

Intelligent Notification Sync

Adaptive notifications that capitalize on user biology and routines:

-  **11:45h Midday Spark:** Reminders to drive movement before the midday lunch peak.
-  **16:00h Post-Work Energy:** Targeted prompts to spark evening workouts or active commutes (16h–19h).
-  **19:00h+ Engagement Loop:** As activity dies down, trigger wellness notifications or interactive surveys to rate the app, products, and solicit R&D feedback.

KNOWLEDGE HUB

Wellness Content Delivery

Maintaining mindshare during rest periods with high-value digital resources:

-  Healthy Recipes
-  Workout Tips
-  Nutritional Advice
-  Meal Prep Tips
-  Expert Blogs
-  Mindfulness Guides

Sunday Strategy

LOYALTY: PROGRESS RECAPS

Celebrating Cumulative Wins

Transform Sundays from "Low Activity" days into "Victory" days by sending a celebrated **Weekly Wellness Recap**.

Celebrate consistency over total steps to foster long-term brand affinity and motivation.

E-COMMERCE LIFECYCLE

The Gamified Revenue Loop

Reward habit consistency during high-energy days (Tuesdays/Saturdays):

- ★ Earn points for maintaining "Peak Day" streaks.
- 🛒 Redeem for discounts on premium hardware (Ivy, Time, Leaf).
- 👥 Convert data into hardware upsells and long-term retention.
